

● POLICY · WARRANTY · SAFE-USAGE PLAYBOOK

The playbook that keeps your **accounts** alive.

Everything you receive, everything we replace, and the exact way to run your ScaleShield structure — so your accounts warm up clean, dodge red flags, protect themselves with a backup, and scale without surprises.

01 · WHAT YOU RECEIVE

What's **included**.

Every Business Manager package ships with ad accounts inside it. The number in the package name is the number of ad accounts you get.

BM3

3 ad accounts

A verified Business Manager with 3 agency ad accounts inside.

BM10

10 ad accounts

One Business Manager containing 10 ad accounts — ready to share out.

BMx

x ad accounts

The rule is simple: the number on the BM is the number of accounts inside it.

Simple rule

A **BM10** is a Business Manager that comes with **10 ad accounts**. A BM3 comes with 3, and so on — the count in the name is always the number of ad accounts you receive inside that BM.

02 · WARRANTY

Warranty & **replacements**.

If an account doesn't perform, you don't eat the loss — we replace it.

FREE

Dies on \$0 spend

If an ad account arrives dead or dies before it spends, you get a free replacement — no charge, no hassle.

Any issue or disable

Disabled, restricted, or acting up? Flag it and we swap in a fresh account so you keep moving.

⚠ Applies only while the account has **no spend** on it — once an account has spent, it's no longer eligible for free replacement.

Monthly = unlimited

On any monthly subscription, replacements are **unlimited and unconditional** — whatever happens to an account, we replace it. No questions asked.

The monthly promise

For monthly plans, the policy is the same regardless of what happens to an ad account: **we replace it**. Unlimited replacements, no questions asked — your job is to run offers, ours is to keep live accounts under you.

03 · STRUCTURE

How the **structure** works.

We hand you a dedicated profile — think of it as an ad-account distributor, not your operating workspace.

The one rule inside the profile we give you

We create a profile for you on **AdsPower** and hand you access. Inside that profile, **do not perform any actions except sharing assets out to your own profile**. Don't run campaigns, edit settings, or operate inside it. Treat it purely as a **distributor**: share the BM and ad accounts into your own AdsPower profile and work from there. This keeps the source clean and avoids bans and red flags.

1 · You get the distributor

We share a ready AdsPower profile to you, loaded with your BM and ad accounts.

2 · Share assets out

From that profile, share the ad accounts / BM into **your own** profile. That's the only action you take inside it.

3 · Operate from yours

Run everything from your own profile. The distributor stays untouched, so the assets stay clean.

04 · WARM-UP

Your first **24–48** hours.

Warm up clean and the account rewards you. Rush it and you invite scrutiny.

\$5–15

Warm-up daily spend

24–48h

No renaming BM / accounts

Low → High

Daily limits climb fast

Don't panic about the low daily limit

Ad-account daily limits **start low on purpose**. Don't worry about it — we have a system behind the accounts that **skyrockets those limits** once you start using them. Warm up clean and the ceiling climbs on its own.

✓ Do

- ✓ Run only warm-up ads at **\$5–15/day** for the first 24–48 hours
- ✓ Keep the BM name and ad-account names **exactly as delivered** at first
- ✓ Use the profile we give you only to **share assets to your own profile**
- ✓ Operate from **your own** AdsPower profile
- ✓ Let the account sit and build trust before scaling

✗ Don't

- ✗ Change the BM name or ad-account name in the first 24–48 hours
- ✗ Run campaigns or change settings inside the distributor profile
- ✗ Push big spend on day one
- ✗ Spike straight to your daily limit before the account is warm
- ✗ Panic about the low starting limit — it lifts fast with usage

05 · SCALING

The safest way to **scale**.

Four steps, in order. This is the structure that builds trust before volume.

1

STEP ONE

Add one card — then wait

Attach a single payment card and let it sit for 5–6 hours before you launch anything. No rush, no multiple cards.

Wait 5–6 hours

2

STEP TWO

Initial engagement campaign

Launch one soft engagement campaign first — low spend, simple creative — to register clean, normal activity on the account.

Day 1

3

STEP THREE

Scale gradually

Step spend up in stages instead of spiking. Let each increase settle before the next one — steady beats sudden.

Days 2–5

STEP FOUR

Build full account trust first

Don't chase maximum spend until the account has earned trust. Trust first, volume second — that's what keeps it alive long-term.

Then go big

CRITICAL · DO THIS ON DAY ONE

Keep your assets safe — always hold a backup profile.

A profile can occasionally go down — a browser sync issue, a lockout, or a problem on your main. If **every BM lives in one profile** and that profile goes down, you lose your door in. The fix is simple: keep a **second profile** with the **same BMs shared to it**, so access always lives in two places and you can restore everything.

**Why this matters**

Never keep all your access in a single point of failure. If your main profile goes down and it was the only place your BMs were shared, recovery is slow and painful. A backup profile turns a disaster into a **non-event** — you simply switch to the backup and keep working.

DO THIS RIGHT AFTER YOU RECEIVE ACCESS

The backup steps.

1

STEP ONE

Create a second AdsPower profile

After we give you access to the profile we set up, create **another profile of your own** in AdsPower — this is your dedicated **backup profile**. Keep it separate from your main working profile.

2

STEP TWO

Share all your BMs to the backup

From your main profile, **share every BM (and its ad accounts) to the backup profile** with full access. The backup should hold a complete copy of access to all your assets — nothing left out.

3

STEP THREE

Verify the backup can see everything

Open the backup profile and confirm **every BM and ad account is visible and accessible** from it. If anything is missing, share it again before you move on.

4

STEP FOUR

Keep the backup idle

Don't run campaigns from the backup — it's a **safety net, not a second workspace**. Same principle as the distributor: leave it untouched so it stays clean and ready.

5

IF YOUR MAIN EVER GOES DOWN

Switch to the backup & restore

If your main profile goes down, log into the **backup** — you still have **full access to every BM and ad account**. From there you can re-share your assets to a fresh profile and keep operating, with nothing lost.

Zero downtime

**The result: no single point of failure**

With a backup profile holding the same BMs, **even if one profile dies your assets survive** — because access lives in two places. This one habit is the difference between a minor hiccup and losing your accounts. Set it up on day one and keep it current whenever you receive new BMs.

06 · CREATIVE

Better ad approval rates.

Meta reviews every creative closely — frames, audio, text, and composition — so re-uploading the identical file usually gets the identical result. The fix is two-pronged: appeal genuine mistakes, and keep a steady flow of fresh, varied creative (free editors like CapCut make spinning up new versions quick) so you never depend on a single asset.

**Video variations**

Cut several genuinely different versions — new hooks, opening frames, pacing, and edits — so you're testing real variety, not one asset.

**Color grading**

Experiment with new color grades and visual styles so each version has its own look and feel.

**Audio adjustments**

Swap in different voiceovers, music, or audio mixes — audio is half the creative and half the test.

Graphics & icons

Add branding, icons, graphics, captions, and overlays to make each version genuinely unique and on-brand.

New thumbnails

Refresh thumbnails, text placement, and transitions to change the first impression and the scroll-stop.

Creative testing

Run multiple variations in parallel instead of relying on one — let the data surface your highest-converting creative.

Think a rejection was a mistake?

Meta's review isn't perfect — false positives happen. The right fix is **Request Review / appeal** on the rejected ad, not another upload of the same file. Appealing is what actually overturns a bad call and cuts your downtime. If an appeal stalls, our team can help you escalate.

Pro tip — never ride one creative

Top advertisers rarely rely on a single asset. They continuously test new angles, visuals, hooks, and layouts — which lifts approval odds, fights creative fatigue, and gives Meta's delivery system more options to optimize toward your best performer.

07 · FAQ

Policy questions.

Q What does a BM10 actually include?

A A Business Manager with 10 ad accounts inside. The number in the package name is the number of ad accounts — BM3 = 3 accounts, BM10 = 10 accounts, and so on.

Q When do you replace an account?

A Any account that dies on \$0 / minimal spend or runs into issues is replaced free. On monthly subscriptions, replacements are unlimited and unconditional — whatever happens, we replace it, no questions asked.

Q What am I allowed to do in the profile you give me?

A Only one thing: share the assets out to your own profile. Don't run campaigns or change settings inside it — it's a distributor, not your workspace. Operating only from your own profile is what protects the source from bans and red flags.

Q How do I protect myself if a profile goes down?

A Keep a backup profile. Create a second AdsPower profile and share all your BMs to it, so if your main profile ever goes down you still have full access from the backup and can restore your assets to a fresh profile — zero downtime.

Q Why can't I rename the BM or ad accounts at first?

A Renaming in the first 24–48 hours is a classic suspicion trigger. Keep names exactly as delivered during warm-up; you can adjust later once the account has built trust.

Q My daily limit is tiny — is something wrong?

A No. Limits start low by design. Our system behind the accounts raises them quickly as you spend — warm up clean and the ceiling climbs on its own.

Q What's the safest way to scale?

A Add one card and wait 5–6 hours, run a soft initial engagement campaign, then scale spend gradually in stages. Build full account trust before pushing maximum volume.

• **STILL HAVE QUESTIONS?**

Not sure about a rule? **Just ask.**

Our operators are on Telegram 24/7. Walk through your setup, warm-up plan, backup profile, or a replacement with a real human — same-day, every day.
